

# Introducing the FC Safety Shield<sup>®</sup>

**FC SAFETY**

A Revolutionary NFC (Near Field Communications) tool designed to help you manage and maintain compliance worldwide.

- Instant Asset Inspection
- Expiration Date Notifications
- Easily Reorder Supplies
- Geocoded for Compliance
- Robust Backend Reporting

*This technology allows for monitoring all of your safety equipment by site, region, or globally.*

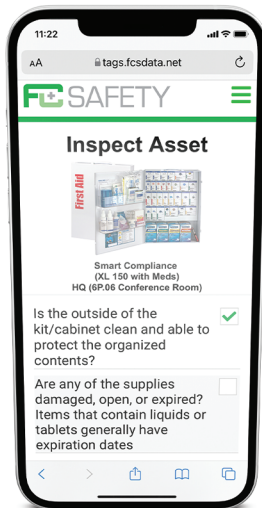

## The FC Safety Shield makes compliance Easy

### 1 TAG

Attach Safety Shield **TAG** to your safety assets

### 2 TAP

**TAP** Safety Shield to enter inspections

### 3 MONITOR

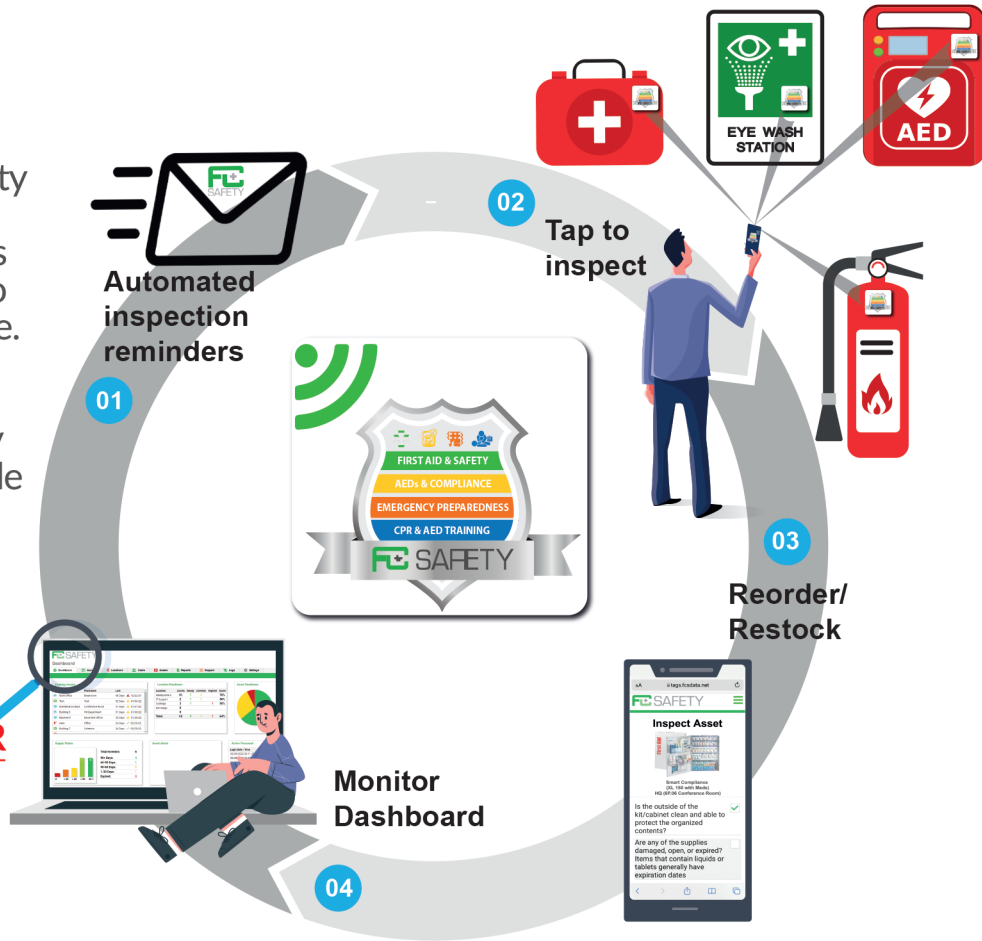

**MONITOR** entire safety program at a glance

## HOW IT WORKS

After attaching a preprogrammed Safety Shield **TAG** to your safety asset and assigning it a location, Email Reminders will be sent to notify your inspectors to inspect that asset on a regular schedule.

The inspectors then need to simply **TAP** their mobile phones to the Safety Shield to enter an inspection. No mobile apps are required.

The Site or National Manager will be notified of any out of compliance situations by a certain deadline ensuring compliance and visibility. The Shield makes it easy to **MONITOR** all of your sites, either locally, nationwide, or globally.

## COMPLIANCE SOLUTION

- ✓ Robust Reporting System
- ✓ Dashboard showing compliance AT-A-GLANCE for all locations
- ✓ Ability to assign custom inspection questions
- ✓ Escalating Emails and SMS Notifications and Alerts

## CONVENIENT ORDERING OF SUPPLIES

- ✓ Easily track items with expiration dates
- ✓ Convenient reordering of AED pads, batteries, first aid refills, eyewash solution etc.

## ELIMINATE COSTLY VAN BASED SERVICE

- **Control** – Be in charge of ordering only what you want and need
- **Convenient** – Our technology makes it easy to monitor and reorder supplies
- **Risk Management** – Engagement by your employees dramatically improves chances for successful outcomes
- **Cost Effective** – Our solution saves up to 50% over van-based first aid service
- **Secure** - NFC (Near Field Communication) Technology is much more secure than QR or Barcodes, which can be phished/hacked. NFC ensures the user is in close contact with the safety asset, and it doesn't require a separate app
